Miller Ridge avalanche

Date
Thu, 03/16/2023 - 01:20
Activity
Skiing

Saw this natural D2 soft slab off the east aspect of Miller Ridge. The crown looks shallow, so I'm guessing it ran at the storm interface.

No other avalanches or signs of instability observed. Winds were light out of the NW and the HN of the settled snow was about 10cm.

Region
Cooke City
Location (from list)
Miller Ridge
Observer Name
Nina Hance
