

From an observation:

When approaching the base of Mt. Blackmore this morning at roughly 8:45am we observed strong swirling winds at higher elevations (summit of Blackmore and the Elephant/Blackmore Saddle). The winds we observed were primarily loading snow onto E and SE facing aspects. Furthermore, we witnessed four naturally triggered avalanches over a twenty minute span. All slides appeared to be D1/D2 on E and SE aspects and, seemingly, restricted to the newly loaded snow. Photo: SAM

Advisory Region

Northern Gallatin

Longitude

-111.00W

Latitude

45.45N

Avalanche Details: [Natural and human triggered wind slab avalanches in Hyalite](#)

Northern Gallatin, 2019-12-01
