Skier triggered small slide Mount Wheeler

Wheeler Mountain Northern Gallatin 1/18/2020 Code SS-AS-R1-D1.5-O Latitude 45.50970 Longitude -111.08200 Notes

From obs: "Skied into to a pillow of snow. I think it started as just sluff but then broke off an avalanche. It was not wide but the crown is estimated at 2 feet. It was not moving fast and I just dug into the <u>bed surface</u> and slowly moved out of it. I was the second skier. The first skiers <u>track</u> did not go as deep as mine. failed on weak facets at the base of a steep roll over."
