

## Human triggered wind slab on Lulu

Lulu Pass  
Cooke City  
1/30/2020  
Code  
SS-AFr-R2-D2-S  
Elevation  
10000  
Aspect  
S  
Latitude  
45.07090  
Longitude  
-109.95800  
Notes

We triggered this avalanche of wind-drifted snow as we approached very carefully from a low angle slope above, on 1/30/2020. This was near Lulu Pass outside Cooke City on a south facing slope at 10,000'. It broke within recently drifted snow, but these slabs could be enough weight to break deeper and wider on sugary layers deep in the snowpack. I initially approached where the [cornice](#) was a little steeper (no overhang though), and then I got that funny feeling and backed off and went to safer feeling spot with the intention to dig at the top of the slope. It broke within the recent snow/wind load, and did not step down. It was about 100' wide x 70' long x 2-3' deep.

Number of slides  
1  
Number caught  
0  
Number buried  
0  
Avalanche Type  
Soft slab avalanche  
Trigger  
Foot penetration  
Trigger Modifier  
r-A remote avalanche released by the indicated trigger  
R size  
2  
D size  
2  
Bed Surface  
S - Avalanche released within new snow  
Problem Type  
Wind-Drifted Snow  
Slab Thickness  
24.0 inches  
Vertical Fall  
50ft

Slab Width

100.00ft

Weak Layer Grain type

Decomposing and Fragmented precipitation particles

Weak Layer Hardness

4F

Slab Layer Grain Type

Wind Broken precipitation particles

Slab Layer Hardness

4F+
