

# Hyalite Peak

Date

Sun, 11/08/2020 - 17:52

Activity

Skiing

65 cm on the ground on a north aspect ~9700'. East aspects were getting heavily loaded above tree line and probably have a substantially deeper snowpack. ECTP-23 on a crust/facet sandwich 25 cm down (right below the old/new interface). There was another thin FC layer midway down and already some large depth hoar grains at the ground. Deep Slabs 2021 here we come!!

Region

Northern Gallatin

Location (from list)

Hyalite Peak

Observer Name

Henry Coppolillo
