Large Natural on Saddle Peak, between the peaks

Saddle Peak Bridger Range 12/28/2021 Code N-R2-D2 Elevation 9000 Aspect E Latitude 45.79430 Longitude -110.93600 Notes

From skier obs on 12/31/21: 2 or 3 days ago [Saddle] went to the ground, big, between the peaks, full <u>track</u>. Yesterday quarter Saddle went big as well. Stepped down lower in the <u>track</u>.

the whole basin between the peaks [except a pocket that slid 3 days earlier] pulled out just under the <u>cornice</u> and went to ground until it went into the narrows and then rode up on a layer until about halfway down and then stepped down another 2-3' and ran at least 2/3 of that run to the traverses back to schlasmans.
