Activity

Snowmobiling

Same PWL's as observed in recent past. Newly forming wind slabs and a more recently formed 2 cm (very fragile) melt freeze crust at 228 cm.

4-5 in. HST on top of melt freeze crust

A lot of blowing and lightly falling snow the past few days. Larger drifts forming on the NE aspect ridge line where we dug our test pit today.

CTH 192 cm above melt freeze crust

Region

Island Park

Location (from list)

Sawtelle Peak

Observer Name

Cheyenne Rasmussen
