Number of slides

Slab Width

Dug at South facing <u>snowpit</u> at 9700' near the base of a wind-loaded slope, ECTX HS:280. Continued on less than 200' up the slope, the skier breaking trail triggered the avalanche. The third skier in the group of five was caught, carried, and buried to the waist. The crown was 1-2' deep, and 50 feet wide. Location: South of Fisher Mountain. Yesterday triggered a small windslab on a north-facing slope on miller ridge, no one was involved.

Number caught Number buried Avalanche Type Soft slab avalanche Trigger Skier Trigger Modifier u-An unintentional release R size 2 D size **Bed Surface** I - Interface between new and old snow Problem Type Wind-Drifted Snow Slab Thickness 18.0 inches Vertical Fall 69ft
