

One maybe two distinct seemingly natural large natural slab avalanches on small slope directly next to bridger canyon drive. One on the lookers left was likely cornice triggered, but on the right it's unclear to me if it propagated or released naturally.

Advisory Region  
Bridger Range  
Longitude  
-110.91W

Latitude

45.72N

**Avalanche Details:** [Avalanches on Bridger Canyon drive](#)
