

From email: "Observed a fresh slab avalanche on Mt. Henderson this morning. E, SE aspect, 9,900'... would estimate the size of the crown to be 2-4' deep and about 80' wide... Likely a natural avalanche (from about 36 hrs ago), but there were fresh sled tracks in the vicinity from yesterday, so possibly a remote trigger." Photo: B. Fredlund

Advisory Region Cooke City Longitude -109.95W Latitude 45.05N

Avalanche Details: avalanche on Henderson Mtn.
