

Whumpfing in T. Meadows

Date

Sun, 12/17/2023 - 11:00

Activity

Snowboarding

Went touring with the intention of skiing the main Texas Meadow S. face. Heard numerous loud whumphs while skinning across the meadow below the face. Decided to not ski and dig a pit on a similar south-facing slope. Results were a CT15 Q2. On the way back up to Bradley's had several smaller collapses but none as large and widespread as those observed in the meadow. Plenty of large surface hoar crystals on my way in too.

Region

Bridger Range

Location (from list)

Texas Meadow

Observer Name

A. Glenn
