

Not surprising - all of Muddy Ridge slid

Date

Sat, 01/27/2024 - 14:00

Activity

Snowmobiling

Starting at $45^{\circ}11'13.26''\text{N} / 111^{\circ}27'36.92''\text{W}$, the NNE slope slid (likely rider caused 2 days ago).

The adjacent slopes at $45^{\circ}11'18.09''\text{N} / 111^{\circ}27'54.78''\text{W}$ further west were slightly newer perhaps the 26th or late on the 25th. Each ripped down to the ground at the crown. Severe instability was present even when cresting over the slope from the entrance through the regular access to cedar - still not broke open.

Region

Northern Madison

Location (from list)

Buck Ridge

Observer Name

TJ Krob
