Activity

Snowboarding

Toured up bacon rind via the ridge ascent. Noted a small melt freeze crust below 7800' with 2-3" above it. Low density snow capped a denser slab above the weak snow on the ground. signs of instability were less obvious than they have been. Still triggered several tree shaking collapses, with cracking up to 100ft above me. Riding quality was quite nice.

noted a large avalanche that broke in the E,NE bowl off Ernest Miller, appeared to be hundreds of feet wide and several feet deep.

Region

Southern Madison

Location (from list)

Bacon Rind

Observer Name

Riley Lindsey
