

Pretty Good Around Cooke

Date

Sun, 11/24/2024 - 14:05

Activity

Skiing

Performed Stability test on Henderson Mountain today. Elevation 9600', SW facing slope. HS 85cm, New Snow 20cm. Of Note, 1mm Rounding/Moist Facets at ground with 1CM Melt Freeze Crust 60cm from surface. 1mm Facets on either side of MFcr. ECTN 6 at new/old snow interface and ECTN25 on MFcr 60cm down. Generally pretty good looking snowpack for November 24. No collapsing or cracking of the snowpack and no recent avalanche activity observed.

Region

Cooke City

Location (from list)

Henderson Mountain
