

Deep in the Crazies

Date

Tue, 02/18/2025 - 15:20

Activity

Snowmobiling

Deep snowpack in the Crazy Mountains and seemingly strong. It seems that the snowpack in the Crazies is typically weak, shallow, and sketchy. This year the snowpack is quite deep - crazy!

We saw one soft, storm [slab](#) and a few sluffs. We didn't get onto slopes steeper than 30 degrees, but we felt ok traveling in runout zones which says a lot.

Winds were drifting some snow in the alpine but otherwise mostly calm. Tons of snow available for the wind when it finally picks up

Region

Out of Advisory Area
